## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-60 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant has filed a Request for Continued Examination (RCE) to enable the consideration of additional prior art after allowance. This application has been previously allowed on February 21, 2008. The claims are again allowed for the following reasons.

All claims are directed to treating painful episodes in sickle cell disease by transdermal administration of buprenorphine. The art applied in the examiner's first office action is representative of the state of the art as known to the examiner. In addition, the comments submitted by applicant May 24, 2007 have been carefully reconsidered. The Crain reference requires treatment of sickle cell anemia which involves the combination of buprenorphine in combination with a bimodally-acting opioid agonist and an agent that inhibits GM1-ganglioside in nociceptive neurons. Applicant argues that nothing in the prior art would motivate one of ordinary skill in the art to select the buprenorphine opioid and administer it in the absence of a GM1-ganglioside inhibitor to treat a painful episodes due to sickle cell disease. In addition, applicant states that the treatment of a painful episode resulting from sickle cell disease is a specific type of pain that is different from the chronic pain stemming from vaso-occlusion caused by sickle cell and are severe, occurring at one or more locations, and may persist for long periods of times, days or weeks.

Regarding the recently submitted references, the first reference, "Buprenorphine for Depression", discusses buprenorphine delivery transmucosally for the treatment of refractory depression. It does not mention the transdermal treatment of pain associated with sickle cell disease.

The second reference, Noble et al., "protection of endogenous enkephalin catabolism," does not mention the use of buprenorphine for the treatment of sickle cell anemia, however, it does discuss the use of opioid drugs to treat chronic pain. This reference would be considered as background for the present invention. Similarly, the Berrocoso et al. reference discusses the different roles of 5-HT<sub>1a</sub> and 5-HT<sub>1b</sub> receptors on the anti-nociceptive and antidepressant effect of tramadol. This would also be considered background for the present invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
